S5 Menu System:

Choose between either jQuery or the S5 Effects scripts to power this template's menu system. jQuery is running in no conflict mode so you shouldn't experience any script conflicts but if you do just switch to the S5 Effects option. This will make ensure your modules and components won't cause any javascript conflicts using the menu system. Just mouse over the top menu in the demo and you will notice the menu smoothly expand in, fade in or drop in depending on the demo you are viewing.

Don't want this fancy menu? Not a problem, you can switch to the standard suckerfish menu system in the template configuration or completely hide the menu altogether.
